

# Corporate Planner Web-Client (CP-Air)

standalone Webserver

Installation Notes

Standard Recommendations for Hardware and Software

**Please note!**

Depending on the application of the software (structure size, number of users, calculations within the structure), the hardware configuration which is actually required may vary from this recommendation. We will be happy to assist you in the planning of your project-related system environment. On request, the installation can be carried out as a service of CP Corporate Planning AG. For complex IT environments, we also offer a technical workshop as preparation for the installation.

**Standard Recommendations for Hardware and Software**

**An up-to-date operating system patch status is prerequisite for all installations.**

- Windows 10, Windows Server 2012, Windows Server 2012 R2, Windows Server 2016, Windows Server 2019
- Processor with 4 cores
- 4 GB RAM
- 100 MB disk space is required for the installation
- Microsoft .NET Framework 4.8 (installs automatically)
- Windows Installer 4.5
- Corporate Planner Web Client: Access via any browser in the latest version

For a detailed description of the installation please refer to the [Technical Manual](#).

## General Notes on Installation

All installations require **Administrator rights**. The Corporate Planner webserver standalone is for installation on a dedicated system and not on the application server (CP-Server). It is not possible to install the CP-Air webserver standalone on the same system as the application server.

## Modifying / Repairing an Installation

It is only possible to modify an installation or carry out a repair installation by running the setup again. Having done so, select the "Modify" or "Repair" option and follow the instructions of the Installation Wizard.

Changing or repairing the installation via the Windows Programs and Features is disabled at present.

## CP Corporate Planning AG Support

If you have any queries concerning installation or configuration, please contact our Support.
